Enhance Web Elements with CSS

Aim:

To design and enhance web page elements using HTML5 and CSS3 by applying different CSS properties such as colors, layout, spacing, fonts, and responsive styling.

Description:

This program demonstrates how web elements can be enhanced using CSS styling techniques. A basic HTML webpage is created containing elements such as headings, text, buttons, and form inputs. CSS is applied to improve the appearance of these elements by adding background colors, margins, padding, borders, and font styling. Layout techniques like flexbox or grid can also be used to organize the content properly on the page. By enhancing the visual design and structure, the webpage becomes more attractive, readable, and user-friendly. This program helps in understanding how CSS is used to control the presentation and layout of web pages.

Algorithm:

1. Start the program.
2. Create the basic HTML structure using `<html>`, `<head>`, and `<body>` tags.
3. Add a title for the webpage inside the `<title>` tag.
4. Link the CSS stylesheet or add internal CSS inside the `<style>` tag.
5. Create different HTML elements such as headings, paragraphs, buttons, images, or form inputs.
6. Apply CSS properties to style the elements (color, background-color,

font-size, font-family).

7. Add margins and padding to improve spacing between elements.
8. Apply borders and border-radius to enhance the appearance of elements.
9. Use layout techniques such as Flexbox or Grid to arrange elements neatly.
10. Add hover effects or transitions to improve interactivity.
11. Adjust the design to make the webpage responsive for different screen sizes.
12. Save and run the webpage in a web browser.
13. Verify that all elements are styled and enhanced properly.
14. Stop the program.

Code:

```
<!DOCTYPE html>
<html>
    <head>
        <meta charset="UTF-8">
        <meta name = "viewport" content = "width = device-width, initial-scale =
1.0">
        <title>
            CSS Enhancements - Shadows,Borders,Background
        </title>
        <style>
           body{
        text-align : center;
        background-color : rgb(232, 223, 223);
        }

    header{
    text-align : center;
    padding : 30px;
    background-color : rgba(255,255,255,0.8);
    box-shadow : 10px 10px 5px rgb(141, 210, 233);
    }
    header h1{
    color: rgb(0, 0, 0);
    text-shadow: 2px 2px 4px rgba(0, 0, 0, 0.964);
    font-size: 54px;
    }
```

```
    footer{
    text-align: center;
    background-color: rgba(0,0,0.7);
    color: white;
    padding: 10px;
    font-size:16px;
    border-top-left-radius: 10px;
    border-top-right-radius: 10px;
    }
    footer p{
    margin : 0;
    }
    .card{
    background-color: rgb(140, 190, 232);
    border-radius:15px;
    box-shadow: 0.8px 16px rgba(0,0,0.25)
    max-width:600px;
    margin: 50px,auto;
    padding: 30px;
    text-align : center;
    }
    .card img{
    width:150px;
    height:150px;
    border-radius:50px;
    box-shadow: 0 4px 10px rgba(0,0,0,0.3);
    margin-bottom: 20px;
    }
    .card p{
    font-size: 17px;
    color : #555;
    }
    </style>
    </head>
    <body>
       <header> <h1> CSS Enhancements Demo</h1>
    </header>
    <div class = "card">
